## Low Frequency Tuner ME/LFT(X)2

### Description

Decoustics Low Frequency Tuner acoustical wall and ceiling panels consist of a multiple density core, with a membrane type absorber (drumskin) located within the core. The face of the panel is then finished with a fabric or vinyl.

The installed panel provides acousticians with a method of controlling low frequency reverberation.

Available in optimum 2 1/16" (52 mm) thickness, panels are supplied complete with factory installed devices for mounting e.g. slide and engage z-clips secured to clips or continuous wall or ceiling track.

### Panels

All Decoustics panels are custom fabricated and offered in a variety of geometric shapes and finishes. ME/LFT(X)2 panels are currently only available flat, and with square edges.

### Design Considerations

When using speakers in ceiling or wall panels, it is recommended the speaker grille be visibly mounted at the face of the panel. Speaker function creates air movement and any fabric covering the speaker will experience premature soiling.

### Standards, Tests and Approvals

Surface Burning Characteristics (ASTM E-84):

All panel components have a Flame Spread rating of less than 25.

Note: Building code requirements may necessitate composite panel testing based on specified finish.

A panel comprised of "Class A" (Flame Spread of 25 or less) components does not necessarily produce a composite panel meeting the "Class A" requirement. Decoustics has a considerable number of composite panel tests on file.

Acoustical Data (ASTM C423: Type F5 Mounting as per ASTM E795).

### Maintenance

Refer to appropriate Decoustics "Cleaning and Maintenance Instructions" for any specific finish.

Decoustics 3-Part Guide Specification.

### Mounting Methods

#### Walls

Mount panels using mechanical fastening only (includes slide and engage z-clips, wall clips and/or track). Consult with fastener manufacturer to determine correct fastener to use for specific substrates, particularly plaster or gypsum board. Note: It is not always possible to secure panels or mounting hardware to a substrate support such as a steel stud.

#### Ceilings

Mechanically mount only. Refer to ceilings section for appropriate suspension method.
